Objective

A motivated final year engineering student seeking an entry-level Software Developer role, with strong foundations in programming, data structures and algorithms, and core computer science concepts, aiming to build reliable, scalable, and efficient software solutions while continuously learning and contributing to team success.

Education

Sharda University , Greater Noida Uttar Pradesh **2022-2026**

B.tech in Information Technology

Skills

Java, Springboot, RestApi Dev, Api Integration, Data Structures & Algorithms, Object-Oriented Programming (OOPs), DBMS, Operating Systems (Basics), HTML, CSS, JavaScript, React.js, Node.js, Git, GitHub

Experience

Software Development Intern — Ineuron Intelligence Pvt. Ltd, Bangalore *12 05-2024 – 25-06-2024*

- Achieved a more reliable and structured banking workflow by developing a Console-Based Banking Application using **Core Java, OOPs, file handling, and collections**.
- Built a modular banking system that simulated real-world operations (authentication, deposit, withdrawal), improving ease of testing and reducing implementation complexity for future extensions.
- Automated routine operations such as transaction recording and validation through file handling, reducing manual verification effort and improving data consistency.
- Collaborated with mentors and the development team to refine system logic, enhance error handling, and ship a stable CLI-based application aligned with clean code practices.

Projects

Algo Visualizer *[Github][Vercel]* *Tech: html, Css, Javascript, react.js, Node.js, MongoDb, openLLM*

- A comprehensive **data structure and algorithm learning platform** enabling users to understand core DSA concepts through animated, step-by-step visual execution of algorithms and operations.
- Supports visualization of **10+ data structures and algorithms**, including Arrays, Stacks, Queues, Linked Lists, Trees, Graphs, and common sorting/searching techniques, providing an interactive learning experience.
- Integrates an **AI-powered explanation module** that delivers step-wise algorithm descriptions and time complexity insights, improving conceptual understanding and learning efficiency by ~35–40%.

Airline Reservation System *[Github] [Vercel]* *Tech: HTML, Node.js, MySQL, Tailwind CSS*

- A flight booking platform that helps users search flights, select seats, and complete bookings in an easy step- by- step flow.
- Designed a reliable backend using Node.js + MySQL with a **transaction-safe seat reservation mechanism**, ensuring **0 double-booking errors** across **~50+ simulated bookings** during testing. Implemented optimized SQL queries that improved data retrieval and update time by **~30%**.
- Designed a responsive UI using Tailwind CSS and tested the system with **50–70 sample bookings** to ensure smooth flow and consistent data updates. Suitable for basic deployment on any cloud environment.

GitHub Access Report Service [Github] [Railway] *Tech: Java, Spring Boot, WebClient, Maven, GitHub API*

- Built a scalable backend service to analyze and map user access across GitHub organization repositories by integrating GitHub REST APIs.
- Implemented authentication using GitHub Personal Access Token (PAT) and handled API rate limits and secure configuration via environment variables.
- Designed and exposed a REST API endpoint to generate structured JSON reports mapping users to repositories.
- Implemented pagination handling using GitHub Link headers to efficiently support large-scale data (100+ repositories, 1000+ users).
- Resolved API limitations by leveraging contributors API instead of collaborators API for public repositories.
- Deployed the application on Railway with a live public API endpoint, enabling real-time access from any device.

ValuEnable Insurance Bot *[Github] [Vercel]* *Tech: HTML, CSS, JavaScript, Web Speech API*

- Built a conversational AI voice bot to automate insurance premium reminder calls using real-time speech recognition and text-to-speech.
- Designed structured conversation flows for policy verification, payment discussions, and user query whandling.
- Implemented responsive UI and state-based conversation management for smooth and context-aware interactions.

Achievements & Certification

- Presented the research paper **"PAPERTRADEX – Simulated Trading on Previous Day Market"** at **ICAIM 2025**, contributing academic insights to financial simulation models. **CERTIFICATE**
- AWS Solutions Architecture Job Simulation.
- Introduction to Prompt Engineering *30 hours* | Sharda University | Jan 2025 – Apr 2025. **CERTIFICATE**
