SDET Intern Candidate · Quality-Focused Developer · Test Automation Enthusiast

Objective

Final-year B.Tech (IT) student with hands-on experience in Java, OOP, and full-stack development, eager to contribute to quality engineering at 3SC. Proven ability to build modular, testable systems, document defects, and collaborate within development teams. Familiar with SDLC concepts and passionate about applying structured testing practices—manual and automated—to ensure reliable software products. Quick learner who thrives in fast-paced, innovation-driven environments.

Education

Sharda University , Greater Noida Uttar Pradesh **2022-2026**

B.tech in Information Technology

Skills

Languages & Testing: Java (Core & OOP), Python (Basic), JavaScript — suitable for Selenium/JUnit/TestNG scripting

Test Automation & QA: Manual Test Case Design, Defect Documentation & Tracking, Automated Script Development, SDLC & QA Methodologies

Web & Frameworks: React.js, Node.js, HTML, CSS, TypeScript, , MySQL

DevOps & Tools: Git, GitHub, CI/CD concepts, File Handling & Collections (Java)

Experience

Software Development Intern — Ineuron Intelligence Pvt. Ltd, Bangalore *12 05-2024 – 25-06-2024*

- Developed a Console-Based Banking Application in Core Java applying OOP, file handling, and collections—resulting in a modular, testable codebase that simulated real-world operations (authentication, deposit, withdrawal).
- Designed the system with testability in mind: each module (auth, transactions, validation) was independently verifiable, reducing implementation complexity and facilitating future test automation.
- Automated transaction recording and validation via file handling, eliminating manual verification effort and improving data consistency a direct analogue to automated regression testing.
- Documented defects and logic gaps during development, refining error handling in collaboration with mentors to ship a stable, clean-code CLI application.

Projects

Algo Visualizer (Full Stack Project) [*Github*] *Tech: html, Css, Javascript, react.js, Node.js, MongoDb, openLLM*

- Built an interactive DSA learning platform visualizing 10+ algorithms and data structures (Arrays, Trees, Graphs, Sorting/Searching); integrated an AI explanation module delivering step-wise descriptions and complexity insights.
- Applied iterative testing during development: each algorithm module was validated for visual correctness and edge-case behaviour before release, improving learning efficiency by ~35–40%.

Paper TradeX (Final Year Project) *Tech: React.js, TypeScript, MongoDB, Yahoo Finance API*

- Built a realistic stock-market simulation platform processing thousands of real market data points daily, requiring robust data validation and consistency checks—demonstrating practical QA thinking in a live data environment.
- Implemented virtual wallet, trade execution, and portfolio analytics (P&L, trade history, holdings); validated end-to-end flows for accuracy and edge-case handling, improving learning efficiency by ~40%.
- Presented research paper 'PAPERTRADEX – Simulated Trading on Previous Day Market' at ICAIM 2025, demonstrating academic rigour and the ability to communicate technical work clearly.

Airline Reservation System [*Github*] *Tech: HTML, Node.js, MySQL, Tailwind CSS*

- Designed a transaction-safe seat reservation backend ensuring zero double-booking across 50+ simulated bookings—demonstrating structured test-case execution and defect-free validation.
- Optimised SQL queries improving data retrieval/update time by ~30%; validated system across 50–70 sample bookings to ensure end-to-end data integrity and smooth user flow.

Achievements & Certification

- Presented the research paper **"PAPERTRADEX – Simulated Trading on Previous Day Market"** at **ICAIM 2025**, contributing academic insights to financial simulation models. **CERTIFICATE**
- AWS Solutions Architecture Job Simulation.
- Introduction to Prompt Engineering *30 hours* | Sharda University | Jan 2025 – Apr 2025. **CERTIFICATE**
