## CAREER OBJECTIVE

Analytical and highly motivated Information Technology student with a strong foundation in **data structures, algorithms**, and **backend system development**. Passionate about building scalable, high-performance systems with **Java, Python, and SQL**. Actively seeking a **Software Engineering Internship** at Tower Research Capital to contribute to the post-trade platform and enhance system reliability, compliance, and performance.

## EDUCATION

Sharda University *Greater Noida, India*
**Bachelor of Engineering** in Information Technology
S.A.H. Sr. Sec. School Jamia Millia Islamia *New Delhi, India*
**Senior School Certificate** (XII) 2019-2020

## SKILLS

**Technical :** DSA**,** JavaScript, Java, SQL, react.js, node.js, MongoDB
**Tools:** Tableau, Power BI, Excel, Git

## EXPERIENCE

**Ineuron Intelligence Pvt. Ltd** *Bangalore, India*
Software development intern 12-05-24 / 25-06-2024

- Built a Java-based Console Banking Application simulating real-world banking functions (deposit, withdrawal, authentication).
- Applied OOPs, file handling, exception handling, and collections for robust system design.
- Practiced modular design, debugging, and hands-on application of Core Java concepts.

## Certifications

- AWS Solutions Architecture Job Simulation. 04-06-2025
- Deloitte Data Analytics Job Siumaltion. 19-06-2025

## PROJECTS

**Paper TradeX (Ongoing)**

- A Smart Stock Market Simulator for Beginners
- Simulates previous day's real market data minute-by-minute
- Virtual wallet, buy/sell tracking, and realistic portfolio analytics
- Key advantage: Learn anytime, beyond live market hours
- Tech Stack: React.js, MongoDB , Yahoo Finance API

**Face Recognition Attendance System**

- Developed a real-time Face Recognition Attendance System using Python and OpenCV.
- Built an intuitive GUI for user registration, live camera feed, and attendance logging.
- Automated attendance records export to CSV/Excel with timestamp tracking.

**Fake Currency Detector**

- Designed a Fake Currency Detection system using Python and OpenCV to identify counterfeit notes.
- Applied image processing techniques like edge detection and feature matching for authenticity checks.
- Extracted security features (e.g., watermark, color patterns) from currency images for validation.
