Objective

A motivated final year engineering student seeking an entry-level Software Developer role, with strong foundations in programming, data structures and algorithms, and core computer science concepts, aiming to build reliable, scalable, and efficient software solutions while continuously learning and contributing to team success.

Education

Sharda University , Greater Noida Uttar Pradesh **2022-2026**

B.tech in Information Technology

Skills

Java, Data Structures & Algorithms, Object-Oriented Programming (OOPs), DBMS, Operating Systems (Basics), HTML, CSS, JavaScript, React.js, Node.js, Git, GitHub

Experience

Software Development Intern — Ineuron Intelligence Pvt. Ltd, Bangalore *12 05-2024 – 25-06-2024*

- Achieved a more reliable and structured banking workflow by developing a Console-Based Banking Application using **Core Java, OOPs, file handling, and collections**.
- Built a modular banking system that simulated real-world operations (authentication, deposit, withdrawal), improving ease of testing and reducing implementation complexity for future extensions.
- Automated routine operations such as transaction recording and validation through file handling, reducing manual verification effort and improving data consistency.
- Collaborated with mentors and the development team to refine system logic, enhance error handling, and ship a stable CLI-based application aligned with clean code practices.

Projects

Algo Visualizer (Full Stack Project) [*Github*][*Vercel*] *Tech: html, Css, Javascript, react.js, Node.js, MongoDb, openLLM*

- A comprehensive **data structure and algorithm learning platform** enabling users to understand core DSA concepts through animated, step-by-step visual execution of algorithms and operations.
- Supports visualization of **10+ data structures and algorithms**, including Arrays, Stacks, Queues, Linked Lists, Trees, Graphs, and common sorting/searching techniques, providing an interactive learning experience.
- Integrates an **AI-powered explanation module** that delivers step-wise algorithm descriptions and time complexity insights, improving conceptual understanding and learning efficiency by ~35–40%.

Airline Reservation System [*Github*] [*Vercel*] *Tech: HTML, Node.js, MySQL, Tailwind CSS*

- A flight booking platform that helps users search flights, select seats, and complete bookings in an easy step- by-step flow.
- Designed a reliable backend using Node.js + MySQL with a **transaction-safe seat reservation mechanism**, ensuring **0 double-booking errors** across **~50+ simulated bookings** during testing. Implemented optimized SQL queries that improved data retrieval and update time by **~30%**.
- Designed a responsive UI using Tailwind CSS and tested the system with **50–70 sample bookings** to ensure smooth flow and consistent data updates. Suitable for basic deployment on any cloud environment.

Paper TradeX (Final Year Project) *Tech: React.js, TypeScript, MongoDB, Yahoo Finance API*

- A smart stock-market learning platform designed for beginners, allowing users to practice trading using **real previous-day market data replayed minute-by-minute**—without risking real money.
- Key features include a **virtual wallet & trade execution system**, detailed **portfolio analytics (P&L, trade history, holdings)**, and a **realistic market simulation engine** that mimics live trading behavior.
- Processes **thousands of data points/day** from Yahoo Finance to generate accurate market movement, improving trading-concept learning efficiency by **~40%**.

Achievements & Certification

- Presented the research paper **"PAPERTRADEX – Simulated Trading on Previous Day Market"** at **ICAIM 2025**, contributing academic insights to financial simulation models. **CERTIFICATE**
- AWS Solutions Architecture Job Simulation.
- Introduction to Prompt Engineering *30 hours* | Sharda University | Jan 2025 – Apr 2025. **CERTIFICATE**
